Foreword

As Minister responsible for multiculturalism and citizenship in Ontario, I am pleased to introduce A Profile of Immigrant Women in Ontario, 1981. This is another in the series of special reports based on analysis of census data.

The publication contains computer maps showing the distributions of immigrant women across the province as well as in the ten Census Metropolitan Areas. Highlights and graphs augment the detailed tabulations.

This profile will serve as an important resource for policy development and service delivery. An understanding of the characteristics of immigrant women in Ontario will assist in tailoring services to facilitate their effective integration into our society.

Further information is available in my Ministry to supplement data contained in this publication. We welcome your inquiries.

A handwritten signature in cursive script that reads "Lily Munro".

Lily Munro
Minister

PREFACE

A PROFILE OF IMMIGRANT WOMEN IN ONTARIO, 1981 has been produced for the Ethnocultural Data Base of the Ontario Ministry of Citizenship and Culture, in support of the Ministry's lead role in multiculturalism and settlement.

The major purpose of the Ethnocultural Data Base is to provide the Ontario Government with information about the patterns of residential settlement and the demographic and socio-economic characteristics of Ontario's ethnocultural and immigrant population. As well, the information provided in this publication is expected to be helpful to other levels of government, business and industry, community organizations and agencies, post-secondary institutions, and the public generally.

The project was carried out by Brian Harrison, Special Advisor on Social Statistics in the Housing, Family and Social Statistics Division of Statistics Canada with the assistance of Statistics Canada personnel noted in the Acknowledgements section. Maps and graphs were produced in the Geocartographics Subdivision of Statistics Canada. General direction of the project was provided by Dorene E. Jacobs, Manager, and Maryelle Tetreault, Assistant Research Officer, Ethnocultural Data Office, Ontario Ministry of Citizenship and Culture.

This report is the second commissioned from Statistics Canada, based on 1981 census data. The first, **Non-English Speaking Immigrants in Ontario, 1981: Socio-Economic Characteristics**, was also carried out by Brian Harrison and published in 1985 by the Ontario Ministry of Citizenship and Culture.

Copies of both reports, as well as other Ethnocultural Data Base publications, may be obtained from the Ontario Government Bookstore, located at 880 Bay Street, Toronto, for personal shopping. Out-of-town customers can write to Publications Services, 5th Floor, 880 Bay Street, Toronto, Ontario M7A 1N8. In Metro Toronto, call 965-6015. Outside Metro, dial 1-800-268-7540. In area code 705, call the operator and ask for Zenith 67200.

Further information about the Ethnocultural Data Base is available from:

ACKNOWLEDGEMENTS

This profile of immigrant women in Ontario was initiated when the author was on assignment with the Housing, Family and Social Statistics Division, Statistics Canada. The author is grateful for the support received from that division in completing this project, particularly from Gordon Priest who made staff available to work on the activity, to Michael Crew who retrieved the tables for the report and to Lucie Lamadeleine and Beryl Gorman who provided invaluable help with typing and word processing activities. Marc Lemay of the Geocartographics Subdivision was responsible for producing the maps.

The author is also indebted to Dorene Jacobs from the Ontario Ministry of Citizenship and Culture who provided guidelines for the production of the report and suggestions for improvement and to Luc St. Amour of the Social and Economic Studies Division, Statistics Canada for his technical assistance.

The author is solely responsible for the opinions expressed and for any errors or omissions which appear in this report.

Brian R. Harrison
Special Advisor on Social Statistics
Housing, Family and Social
Statistics Division
Statistics Canada

HIGHLIGHTS

- . The 1981 Census showed 963,000 immigrant women in Ontario. This represents more than half (53%) of immigrant women in Canada.
- . About 83% of immigrant women live in Ontario's ten Census Metropolitan Areas (CMAs). Approximately 56% of immigrant women in Ontario live in the Toronto CMA.
- . The two major sources of Ontario's immigrant women are the United Kingdom, where 26% were born and Italy, the birthplace of 12%.
- . Immigration patterns for immigrant women have changed considerably over the post-war period. The British Isles, which accounts for almost one third of immigrant women who came to Canada before 1971, was the source of only 14% of those immigrating during the 1971-1981 period. The Caribbean and Guyana region, which is the origin of less than 4% of immigrant women in the period prior to 1971, accounts for 17% in the 1971-1981 period.
- . The proportion of immigrant women unable to speak English or French well enough to conduct a conversation varies from 1% for early immigrants (arriving before 1946) to 14% for the most recent immigrants (arriving in the period 1971-1981).

HIGHLIGHTS (Continued)

- Among immigrant women with a mother tongue other than English or French, language maintenance (the proportion who use their mother tongue as principal home language) is highest for the Chinese, Portuguese, Italian and Greek mother tongue groups.
- Immigrant women from South-East Asia and South Asia tend to be better educated than women from other regions. They have the highest proportions with university degrees (29% and 24% respectively). Immigrant women from Southern Europe have the lowest levels of education, as two-thirds have less than Grade 9.
- Labour force participation is highest for women born in the Caribbean and Guyana region, and South-East Asia.
- An analysis of the occupations of immigrant women shows that women from North and Central America have the highest proportions in managerial, administrative, professional, scientific, teaching and related occupations (37%). This compares to only 8% of women from the Southern European region.
- Immigrant women from South America have the lowest average employment income (\$7,431), with women from Southern Europe having the second lowest (\$8,262). The lowest household incomes are found among women from the Caribbean and Guyana (\$26,147) and South America (\$27,395).

Introduction

Of the 8.5 million people living in Ontario at the time of the 1981 Census, almost one million were women who had immigrated to Canada at some time prior to the Census. These women came to Canada from many different countries, and brought with them a diversity of personal and family characteristics acquired in their country of origin. Their characteristics reflect, to some degree, the immigration policies which were prevalent at the time they entered Canada. Policies governing the conditions of entry have changed considerably since the beginning of the century, and the countries of origin, ethnic composition and skills of immigrants have changed accordingly. Even immigrant women who came to Canada during the same period have diverse characteristics, depending in part on whether they came as family class immigrants or assisted relatives, independents or refugees. Some enter the country with a firm knowledge of one of the official languages, a high level of education, and a long experience of living in a cultural setting not unlike that of Canada. Others are unable to communicate in English or French, have low levels of education, and have spent their lifetime in countries where the culture and social organization were very different from those of their new country. Collectively, immigrant women represent a very heterogeneous group, which reflects the political and economic situation in Canada and elsewhere in the world at varying periods of our recent history.

The purpose of this report is to present a profile of immigrant women in Ontario, using data available from the 1981 Census of Canada. One of the difficulties in presenting a profile of this population arises from the heterogeneity described above. In order to present the data in a straightforward manner, the countries of origin of immigrants must be grouped together into regions, and this may tend to

mask differences between countries. The various regions and components which form the basis of this study were suggested by personnel of the Ministry of Citizenship and Culture, and are shown in Appendix 1.

For purposes of this study, an immigrant woman is defined as a female 15 years of age or older who was born outside Canada and was not a Canadian citizen by birth. The demographic, social and economic characteristics of immigrant women are presented, with a view to identifying the size, nature and geographic distribution of this population as well as important differences in social and economic characteristics. The scope of the profile and the method of presentation are designed to render it interesting and accessible to a broad range of readers, rather than to probe particular problem areas or relationships between variables. A number of other studies are listed in the bibliography and will provide readers with further insight on some of the questions raised in the following pages.

The Number of Immigrant Women in Ontario

How many immigrant women live in Ontario, and what proportion of the population do they represent?

- . Data from the 1981 Census show that there are approximately 963,000 (Table 1) immigrant women, that is, female immigrants fifteen years of age and older in Ontario.
- . Approximately one in four (28%) of the women in the province are immigrants.
- . Over half (53%) of immigrant women in Canada are located in Ontario.
- . The attraction of Ontario for immigrants is also apparent from Table 1. While Ontarians comprise 35% of the total population of Canada, they account for over half (53%) of the immigrants in the country.
- . The 24% of Ontarians who are immigrants compare to 12% in the rest of Canada, and 5% in the United States (figures not shown on table).

ONTARIO

IMMIGRANT WOMEN AS A PERCENTAGE OF TOTAL POPULATION, 1981

By Census Divisions

Place of Birth of Immigrant Women

The following sections present data on the place of birth for immigrant women.

Data for all immigrant women are shown below, followed by data for those who came to Canada between 1971 and 1981.

- . The two major sources of Ontario's immigrant women are the United Kingdom where 26% were born, and Italy, the birthplace of 12% (Table 2).
- . The United States is the next largest source of immigrant women (6%) followed by Germany (5%), Portugal, Poland and the Netherlands (4% each) and Jamaica, USSR and Yugoslavia (3% each).
- . The ten countries mentioned above represent the origin of about 70% of immigrant women in Ontario. The remaining 30% is divided between a myriad of countries from around the world.

Place of Birth of Recent Immigrants

- . The ten major sources account for about 60% of immigrant women with period of immigration 1971-1981 (Table 3).
- . The United Kingdom was the major source country for immigrant women in the 1971-1981 period, with about 13% of immigrant women born in the U.K.
- . Portugal, Jamaica, India and the United States follow in importance as the places of birth for immigrant women with six to eight percent each.
- . The Philippines and Guyana each account for between four and five percent of recent immigrants.

TABLE 2. Major Source Countries for Immigrant Women, Ontario, 1981

	Number	%
United Kingdom	252,090	26.2
Italy	117,925	12.3

Period of Immigration

The 1981 Census included a question asking people born outside Canada in what year they first immigrated to Canada. The results for immigrant women are shown below.

- . About one in three of Ontario's immigrant women came to Canada in the post-war period 1946-1960 (Table 4).
- . The two subsequent decades (1961-1970 and 1971-1981) account for just over half of Ontario women born abroad, with about 25% in each decade.
- . About 13% came to Canada before 1946.
- . Approximately 75% came to Canada before 1971.

TABLE 4. Period of Immigration of Immigrant Women, Ontario, 1981

	Number	%
Before 1946	129,045	13.4
1946-1960	333,695	34.7

Place of Birth and Period of Immigration

Changes in immigration patterns in recent years, which have resulted in fewer arrivals from traditional sources of immigration, are reflected in Figure 1 which shows a comparison of the most recent ten year period (1971-1981) and all preceding periods of immigration.

- . The British Isles, which accounts for almost one third of women immigrating prior to 1971, was the source of only 13.8% in the most recent ten year period (Figure 1).
- . The Carribean and Guyana region, which is the origin of less than 4% of immigrant women in the period prior to 1971, accounts for 16.8% in the 1971-1981 period. It was the major source of immigrant women during the most recent decade.
- . Like the British Isles, European sources of immigrant women show smaller proportions of immigrant women during the 1971-1981 period. Only Southern Europe remained a major source of immigrant women, mainly because of Portuguese immigration.
- . The proportion of immigrant women born in Asia increased considerably in the most recent decade. Among Asian countries, India and the Philippines were the two leading sources of immigrant women during this period.

Figure 1

Immigrant Women by Place of Birth and Period
of Immigration, Ontario, 1981.
(Shows % of total immigrant women in each category)

Source: 1981 Census of Canada, Unpublished Data.

Place of Residence

- . The vast majority (82.6%) of immigrant women in Ontario live in Census Metropolitan Areas, according to the 1981 census (Table 5).
- . Toronto CMA is the major location of immigrant women, accounting for about 56% of immigrant women in the province.
- . Of the remaining CMAs, Hamilton is the place of residence of 7% while 4.5% are located in Ottawa-Hull.
- . Just over 17% of immigrant women do not live in a Census Metropolitan Area.

Knowledge of Official Languages

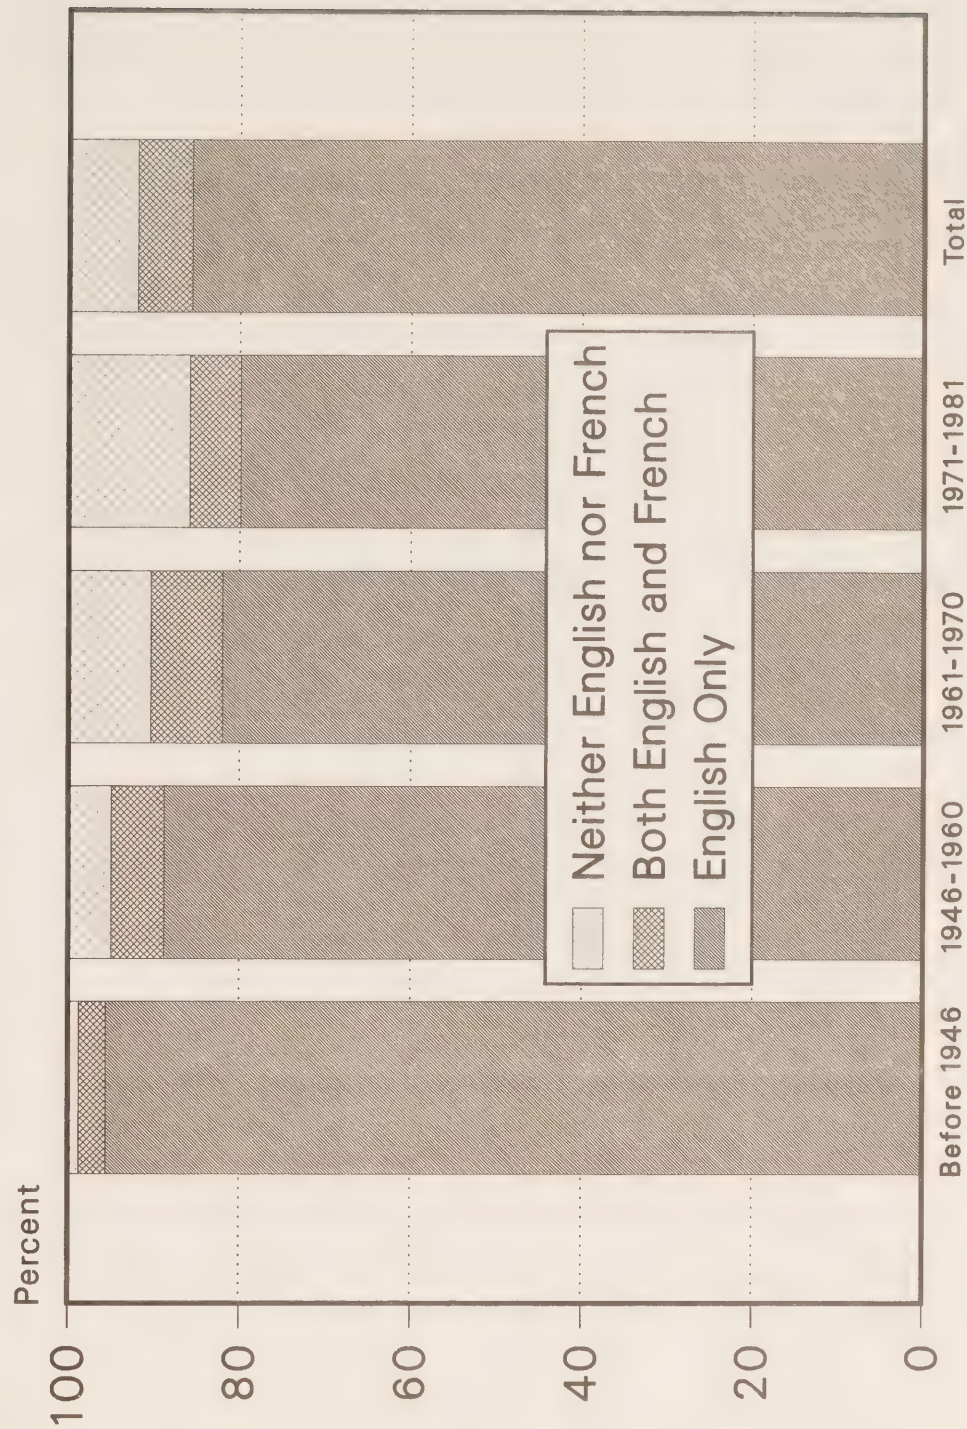

The inability to speak one of the two official languages in Canada constitutes a serious problem for immigrant women who wish to participate more fully in the economic, social and cultural activities of the country.

The 1981 Census included a question on whether respondents could converse in English, French or both well enough to conduct a conversation. The results of this question, classified by period of immigration, are shown in Figure 2 for immigrant women.

- . The proportion of immigrant women unable to speak English or French well enough to conduct a conversation varies from 1.2% of early immigrants (before 1946) to 14.0% for the most recent immigrants (1971-1981).
- . Almost 10% of immigrant women who arrived during the 1961-1970 period were still unable to speak English or French at the time of the 1981 Census.
- . A large majority of immigrant women speak English only (80% or more, depending on the period of immigration).

Figure 2

Immigrant Women by Knowledge of Official Languages and Period of Immigration, Ontario, 1981.

Language Maintenance

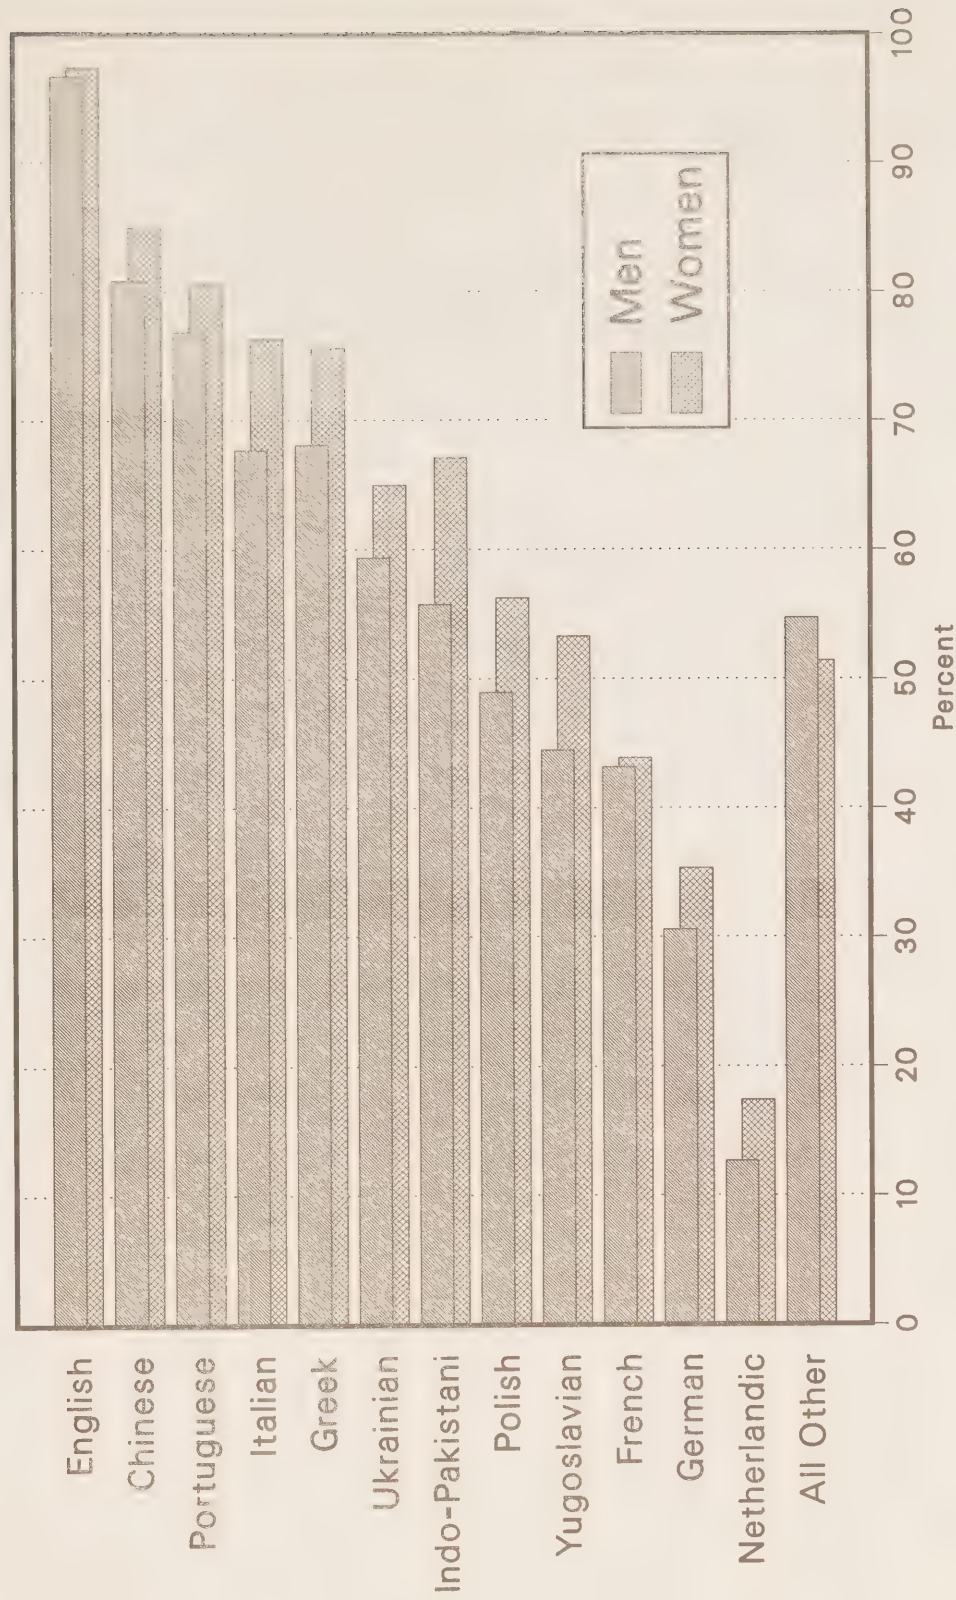

The language characteristics of immigrants who came to Canada are greatly influenced by the presence of English and French in their environment.

Two questions, employed for the 1981 Census, permit the analysis of language maintenance for immigrant women. Mother tongue, the language first learned and still understood, and home language, the language spoken most often at home, can be combined to show the percentage of the population who use the former as principal language in the home. Figure 3 shows language maintenance for both immigrant men and women.

- . The vast majority of immigrants with English mother tongue speak this language at home. Approximately 97% of immigrants with English mother tongue were maintaining their language, according to the census.
- . Among those with non-official languages, the Chinese, Portuguese, Italian and Greek groups have the highest levels of language maintenance, ranging from 72% to 83% (refers to aggregate of men and women).
- . These are followed by the Ukrainian and Indo-Pakistani groups where just over 60% are maintaining their mother tongue as the principal home language.
- . With the exception of the residual category (All Other), language maintenance is invariably higher for women than men. This may be attributable to the lower labour force participation of women and the fewer contacts with English that result.
- . Languages often spoken by earlier immigrants to Canada (e.g., German, Netherlandic) have low levels of language maintenance.

Figure 3

Percentage of Language Maintenance⁽¹⁾ by Mother Tongue and Sex for Immigrants in Ontario, 1981

Source: 1981 Census of Canada, Unpublished data

⁽¹⁾The percent of language maintenance shows the percentage of Ontarians with a given mother tongue who speak that language most often at home, according to the 1981 Census, Unpublished data.

Number of Children Ever Born

The Census question on the number of children born to ever-married women enables the presentation of fertility statistics for women who were not single at the time of the 1981 Census.

- . At younger ages, the variations in fertility by place of birth are slight, but substantial differences occur for older age groups. In the 50-59 age group, when fertility has been completed, the South-East Asians have the greatest number of children born (5.0) followed by other Asian women, and those from the Caribbean and Guyana (Table 6).
- . The lowest levels of fertility are found among women from Central and Eastern Europe, and the British Isles.
- . Differences in the fertility of immigrant women (collectively) and non-immigrant women are slight at most ages.

TABLE 6. Average Number of Children Born to Immigrant and Non-immigrant Women(1) by Place of Birth and Age Group, Ontario, 1981

(1) Refers only to ever-married women. Single women are not asked to report the number of children they have borne at the time of the Census.

Source: 1981 Census of Canada, Unpublished Data.

Number of Children at Home

While the information on number of children ever-born is a useful measure of fertility, it does not indicate whether children are co-residing with their parent(s). Data on the number of children at home must be employed for this purpose. The variations which result are similar to those presented in the preceding section.

- . Immigrant women from Central and Eastern Europe, along with those from the British Isles have the smallest family size, as measured by the number of children at home. This is attributable to the relatively large proportion of women from countries who have no children living with them (Table 7).
- . Women from the Caribbean and Guyana, Southern Europe and South-East Asia have the largest average family size at 1.8 children per women.
- . The average number of children at home for non-immigrant women is only slightly lower than immigrant women.

Education

- . Women from South Asia and South-East Asia are generally better educated than their counterparts from other regions. Among women from South-East Asia 28.9% have university degrees while among those from South Asia the percentage is 23.8%. The higher levels of education of women from these sources persists for both the 15-34, and 35 and over age groups (see Table 11).
- . Immigrant women from Southern and Eastern Europe have the highest proportions with less than Grade 9 education. Among Southern Europeans, 66.2% have less than Grade 9 education (Table 8).
- . The younger immigrant women are far better educated than their predecessors. Only 14.5% of those in the 15-34 age group have less than Grade 9 education, compared to 39.7% of women 35 years of age or older.
- . Overall, non-immigrant women are better educated than their immigrant counterparts, principally because the latter group has a large percentage with less than Grade 9 education.

Labour Force Participation

Census questions on work activity enable the study of labour force participation, that is, the percentage of respondents who had a job or were looking for work in the week prior to enumeration.

- . Labour force participation is highest for women born in the Caribbean and Guyana and for South-East Asia, and lowest for the regions of Europe (except Southern Europe), the British Isles, and North and Central America (Table 9).
- . Differences in the overall labour force participation of immigrant and non-immigrant women are slight.
- . With the exception of the 15-24 age group, where many are still attending school, the labour force participation rates are always highest for the Caribbean and Guyana region.

TABLE 9. Immigrant Women and Non-Immigrant Women by Place of Birth and Age Group Showing Labour Force Participation Rate, Ontario, 1981

Occupation

The occupations of immigrant women are affected by a host of personal and environmental characteristics. The types of jobs these women have will depend on their age, education, knowledge of English or French, amount of time spent in Canada and other factors. The purpose of this section is to present the occupational differences between groups of immigrant women, rather than to probe the reasons for these differences.

- . There is a wide variation in occupations according to the place of birth of immigrant women (Table 10).
- . Immigrant women from North and Central America and from South-East Asia have relatively high proportions in managerial, administrative, professional, scientific, teaching and related occupations, with 36.5% and 31.1% respectively.
- . Women from Southern Europe have by far the smallest proportions in this category (managerial ...) with 7.8% followed by South America with 13.7%. Immigrant women from Southern Europe also have the smallest proportion in the clerical and related occupations (19.7%). They tend to be more concentrated in "processing" type and in service occupations, where they form a large percentage of the female work force in Ontario
- . Though much fewer in number, women from South America follow an occupational pattern similar to their Southern European counterparts.

- . Women from Africa, the British Isles, and the Caribbean and Guyana have high percentages in the clerical and related occupations. Almost one-third of immigrant women reporting an occupation in the 1981 Census are found in this category.

Income

The purpose of this section is to present some basic income data on immigrant women, rather than to provide explanations for observed differences in income. A small monograph could be written on the latter subject, which would require that we consider not only the education and age of immigrant women, but also occupations, the length of residence in Canada, whether they are working full-time or part-time, and other factors. In addition, other measures of income inequality might yield results that differ from those shown in the following tables using averages. The analysis is not meant to be exhaustive but rather to point to possible problem areas and disparities in incomes.

- . Immigrant women from South America have the lowest average employment income (\$7,431), with women from Southern Europe having the second lowest (\$8,262). The lowest household incomes are found among women from the Caribbean and Guyana (\$26,147) and South America (\$27,395). In fact, these are the only two categories where the average household income is less than \$30,000 (Table 11).
- . The highest average employment income is found among women from Central Europe (\$10,331), followed by those from South-East Asia (\$10,017).
- . Among women who do not have high levels of education (less than Grade 9, Grade 9-13), those from South-East Asia, North and Central America, and South America have the lowest average employment incomes. Women from Central and Eastern Europe have the highest.

- . Average employment incomes show considerable variations among immigrant women with university degrees. The highest are found for women from Eastern Europe and the British Isles, (\$16,594 and \$16,495 respectively); the lowest incomes appear for women from South Asia (\$12,210) and South America (\$10,798).

- . If we examine the two age groups for which averages are shown (under 35, 35 and over), we find that women from South America have among the lowest employment incomes in both age groups. Women from Southern Europe have the lowest employment incomes in the over 35 age group, and are also low in the under 35 age group.

Appendix 3

Definitions

Immigrant Woman

Refers to a female 15 years of age or older who was born outside Canada and was not a Canadian citizen by birth according to the 1981 Census.

Non-Immigrant

Refers to those who were born in Canada. Note that Canadian citizens born outside Canada (about 16,000) are included in this category.

Period of Immigration

Refers to groupings of years derived from years of immigration reported by persons who are not Canadian citizens by birth.

Mother Tongue

Refers to the first language learned in childhood and still understood by an individual.

Home Language

Refers to the specific language spoken at home by the respondent at the time of the Census. If more than one language was spoken, the language spoken most often by the respondent was to be reported.

Official Languages

Refers to the ability to conduct a conversation in either of the official languages of Canada.

Census Family

Refers to a husband and wife (with or without children who have never married, regardless of age), or a lone parent of any marital status, with one or more children who have never married, regardless of age, living in the same dwelling. For census purposes, persons living in a common-law type of arrangement are considered as now married, regardless of their legal marital status; they accordingly appear as husband-wife family in the census family tables.

Highest Level of Schooling

Refers to the highest grade or year of elementary or secondary school attended, or the highest year of university or other non-university completed.

Labour Force Activity

Refers to the labour market activity of the population 15 years of age and over, excluding inmates, who, in the week prior to enumeration (June 3, 1981) were employed or unemployed. The remainder of the working age population are classified as not in the labour force.

Occupation

Refers to the kind of work persons 15 years of age and over, excluding inmates, were doing during the reference week, as determined by their reporting of their kind of work and the description of the most important duties in their job. If the person did not have a job during the week prior to enumeration, the data relate to the job of longest duration since January 1, 1980. Persons with two or more jobs were to report the information for the job at which they worked the most hours.

Employment income

Refers to the total income received by persons 15 years of age and over during 1980 as wages and salaries, net income from non-farm self-employed and/or net farm income.

Household income

Refers to a derived variable summing the total incomes of all members of the household.
